User Stories

Here one can understand the business requirements for the smart contract.

Provider Requirements

As a game provider I want to:

- be able to deploy a smart contract representing the roulette game.
- be able to close the table for betting.
- set the winning number.
- close the game by destroying the smart contract.

Player Requirements

As a player I want to:

- bet on either an odd or even number draw.
- not be able to bet on both.
- check winnings after a number is drawn.
- withdraw winnings.
